November 3, 2008

Dear Colleagues,

Currently, the Mycobacteriology (TB) Reference Laboratory within Advanced Diagnostic Laboratories of National Jewish Health, offers the 8 and 12- drug panel for susceptibility testing of *M. avium complex* isolates.

Since the 8-drug panel may not offer a substantial number of options to guide chemotherapy in patients infected with *M. avium complex*, the 12-drug panel is preferred.

Order codes:

8-drug panel	3G
12-drug panel	3H

We value all of you as our clients and want to provide you with the most comprehensive testing available.

Sincerely,

Leonid Heifets, M.D., Ph.D., Sc.D.
Director, Mycobacteriology,
Advanced Diagnostic Labs

Jenny Graham
Supervisor, Mycobacteriology
