Breathe Better Around Your Four-Legged Friends

Pet hair isn’t the problem — it’s what it carries: a protein in animal dander, saliva and urine triggers asthma and allergies.

Reduce exposure
- Wash or brush dogs and cats often to remove dander
- Keep them out of the bedroom
- Keep them outside when possible
- Place covered cat litter boxes away from main living spaces

Make-your-own cleaning supplies
- Round up the following ingredients, then visit our website for cleaning supply recipes:
  - white vinegar
  - liquid dish soap
  - baking soda
  - cooking oil

Reduce dander
- Clean walls and hard surfaces
- Wash “dust catchers” like stuffed animals, bedspreads and curtains
- Vacuum carpet and damp mop floors twice weekly
- Replace carpet with hard flooring and machine-washable rugs
